COMPANY OVERVIEW

Apple Inc. is a multinational technology company headquartered in Cupertino, California, operating in the consumer technology, software, and digital services sectors.

The company designs, manufactures, and markets a comprehensive portfolio including flagship hardware products – the iPhone, Mac, iPad, Apple Watch, and AirPods – alongside a rapidly growing Services business encompassing the App Store, Apple Music, iCloud, Apple Pay, and Apple TV+.

Apple's competitive moat stems from its vertically integrated ecosystem combining proprietary hardware, operating systems (iOS, macOS, watchOS, tvOS, and visionOS), and custom-designed Apple silicon chips that deliver a tightly controlled user experience.

The company serves individual consumers, businesses, educational institutions, and government customers globally.

⚠ LEADERSHIP TRANSITION – APRIL 22, 2026

Tim Cook has stepped down after 15 years as CEO. John Ternus has assumed the role. Questions have been raised about Apple's pace of AI integration relative to rivals. The transition introduces mild uncertainty, though strategic continuity is expected to stabilize operations near-term.

AAPL traded up 2.63% to \$273.17 on April 22, 2026, driven by positive market momentum amid broader index gains (Nasdaq +1.64%, S&P 500 +1.05%). The stock has demonstrated sustained positive momentum across all measured timeframes. Morgan Stanley has highlighted the April 30 earnings as a potential "clearing event" that could drive AAPL toward \$300, citing optimism for positive surprises. Overall sentiment is moderately bullish.
